## EXECUTIVE SUMMARY

Data-driven Senior Product Manager (8+ years) with a strong Computer Science foundation and a proven track record in architecting enterprise-scale cloud platform primitives, legacy-to-modern infrastructure migrations, and high-integrity financial/transaction systems. Recognized for driving cross-functional alignment across 60+ engineers and boundary system teams to deliver high-reliability platform orchestration, standardize core data workflows, and unblock \$XXXM+ in commercial pipeline. Experienced in both high-throughput digital commerce ecosystems (eBay) and mission-critical financial platforms and ledgers (Fintech & Banking), well-equipped to modernize and automate Google Cloud's Quote-to-Cash and ordering orchestration platform.

## CORE COMPETENCIES

**Enterprise Platform Primitives & Orchestration:** Universal Platform Primitives, API & Data Workflow Standardization, End-to-End Infrastructure Migration, High-Reliability Architecture

**Transaction & Financial Systems:** Core Ledger Systems, Banking-as-a-Service (BaaS) Infrastructure, Cloud Cost Insights, Commercial GTM Pipeline Enablement

**Data Consistency & Telemetry:** High-Throughput Data Pipelines, Metric Standardization, Latency & Bottleneck Optimization, System Observability

**Cross-Functional & Boundary Alignment:** Cross-PA Collaboration, Engineering Leadership (60+ engineers), Boundary System Integration, UX & Data Science Partnership

## WORK HISTORY

| Google Cloud | Senior Product Manager | 2018.02 - Present |
|--------------|------------------------|-------------------|
|--------------|------------------------|-------------------|

- **Universal Platform Framework & Primitive Standardization (Tech Impact Award):** Conceptualized and scaled the Universal Dashboard Framework (UDF) from 0 to 20+ core product teams in 12 months; defined standardized UI/API integration primitives to unify cross-platform operations and cut support overhead by 50%.
- **Large-Scale Platform Migration (Feats of Engineering Award):** Directed the end-to-end migration of mission-critical legacy infrastructure into the Google Cloud Console (Pantheon), delivering a unified enterprise platform experience and driving a 20% increase in active user adoption.
- **Enterprise Commercial Alignment & Pipeline Growth:** Partnered with GTM, UX, Data Science, and 60+ distributed engineers to ship 10+ core platform capabilities (+30% velocity), resolving systemic workflow blockers to unblock \$XXXM+ in commercial deal pipeline.
- **High-Throughput Performance & Latency Optimization:** Uncovered an 8x query-to-API performance bottleneck in end-to-end logging workflows; architected an optimization roadmap delivering a 70% latency reduction to guarantee high data accuracy, system responsiveness, and transactional integrity.

- |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |                               |                          |
