EXECUTIVE SUMMARY

Staff Product Manager with 10+ years of experience architecting enterprise-scale cloud data platforms, observability telemetry, and multi-tenant developer ecosystems. Proven track record at Google Cloud driving 0-to-1 platform standardization, telemetry pipelines, and cloud FinOps frameworks adopted across 20+ core engineering teams. Deep expertise in cost attribution (FinOps) for complex compute/AI workloads, metric instrumentation, and end-user enablement ecosystems. Proven ability to bridge engineering, data analytics, and cross-functional stakeholders to deliver mission-critical, secure, and cost-effective multi-tenant platform solutions for complex enterprise and research environments.

CORE COMPETENCIES & DOMAIN EXPERTISE

Product Telemetry & Observability: End-to-End Telemetry Ingestion, Metric Instrumentation, Distributed Tracing, Product Analytics (Looker, GCP Custom Dashboards), Latency Diagnostics

Cloud & AI Financial Operations (FinOps): Granular Cost Attribution, Metering & Chargeback Architectures, AI/Compute Spend Forecasting, Workload Unit Economics

Multi-Tenant Platform & Ecosystem: Multi-Tenant Platform Strategy, Developer Experience (DevEx), Google Cloud Console (Pantheon) Architecture, API Standardization

User Enablement & Operational Excellence: Technical Documentation Ecosystems, Self-Serve Support Tooling, Ticket Reduction & SLA Governance, Cross-Functional Leadership

AI-Ready Infrastructure: Agentic Workflows & Observability, Model Context Protocol (MCP), Large-Scale Ingestion & Distributed Query Optimization

WORK HISTORY

Google Cloud Platform, Senior Product Manager, 2018.02 - 2026.09

- **Platform Spend & Metering:** Co-authored and launched the GKE Cost Insights and platform utilization architecture combining Cloud Monitoring and BigQuery, empowering enterprise organizations to monitor, forecast, and optimize multi-tenant compute and infrastructure spend.
- **Observability & Analytics Strategy:** Defined and executed the multi-year vision for Cloud Observability Analytics as an enterprise data platform, standardizing telemetry ingestion, distributed logging, and query interfaces across heterogeneous and high-throughput workloads.
- **Telemetry Diagnostics & Performance Optimization:** Uncovered an 8x query-to-API latency bottleneck across platform services; partnered with core engineering to cut zero-state query latency by 70%, institutionalizing rigorous telemetry performance SLOs.
- **AI & Agentic Observability:** Spearheaded the integration of AI-ready telemetry and agentic workflows into platform logs, traces, and trajectories, enabling enterprise developers to diagnose complex production systems and contributing to \$100M+ in enterprise sales pipeline.
- **Platform Component Architecture (Tech Impact Award):** Conceived, built, and scaled the Universal Dashboard Framework (UDF) from 0-to-1 as sole PM, unifying fragmented tools into a reusable, API-driven platform component framework across 20+ GCP product teams.

- **User Enablement & Support Reduction:** Overhauled the self-serve developer portal, documentation workflows, and operational configurations, driving immediate user enablement and slashing platform support and diagnostic tickets by 50% in Month 1.
- **Console Migration & Multi-Tenant Governance (Feats of Engineering Award):** Orchestrated the platform migration of legacy Stackdriver telemetry into Google Cloud Console (Pantheon), aligning IAM, security, UX, and core engineering across enterprise dependencies while driving a 20% active enterprise user growth.

Scotiabank, Product Manager, 2017.02 - 2018.02

- **Financial Infrastructure Modernization:** Defined product strategy and API roadmaps for regulated banking workflows across web and mobile channels, partnering with engineering, security, and governance to modernize mission-critical infrastructure; identified a 5x production latency bottleneck and delivered architectural recommendations to restore service resiliency.

NCFG (Fintech Startup), Head of Product, 2016.04 - 2017.02

- **0-to-1 Financial Data Ecosystem:** Led product lifecycle from conception to launch in 5 months, designing high-throughput transaction ledgers, risk evaluation workflows, and merchant APIs handling high-volume real-time transactions.
- **Growth & Adoption:** Partnered with leadership on commercial execution, scaling platform adoption to 200,000+ active transacting users within 90 days.

eBay Inc., Product Manager, 2012.10 - 2016.04

- **Data-Driven Discovery & Traffic Scaling:** Used search behavior, funnel data, and controlled experiments to reshape discovery experiences, delivering 20%+ year-over-year organic traffic growth for three consecutive years.

Rogers Communications, Product Manager, 2010.05 - 2012.10

- **Search Engine Architecture & NLP Ingestion:** Fine-tuned Endeca NLP and indexing pipelines for Canada's largest telecom portal; improved search accuracy by 30% and expanded search keyword coverage by 50%.

HONORS, KEYNOTES & TECHNICAL THOUGHT LEADERSHIP

- **Google Cloud Tech Impact Award (2023):** Awarded as sole PM for conceptualizing, launching, and scaling the Universal Dashboard Framework across 20+ GCP product teams.
- **Google Feats of Engineering Award (2020):** Awarded for exceptional execution of the Monitoring-in-Pantheon migration and legacy infrastructure decommissioning.
- **Industry Conference Speaker:** Featured speaker at Google Cloud Next ("[How MLB Creates Granular Insight with Observability Analytics](#)", 400+ attendees, 4.7/5 rating) and [GrafanaCon](#) (2019) on enterprise observability data strategies.
- **Author & Thought Leader:** Authored [15+](#) official Google Cloud technical whitepapers and blogs on [SQL alerting](#), [Log Analytics and AI Observability](#), [GKE cost visibility](#), and [context-aware observability](#).

EDUCATION

MBA – Rotman School of Management, University of Toronto

BS – Computer Science, Fudan University
